CERTIFICATE

No. 399825

LL-C Certification

This is to certify that the Quality Management System of

I.G. Utensili di Gallesi
Via Amos Verzelloni, 12/B
42015 Correggio (RE)
Italy

has been assessed and found to be in compliance with the standard

ISO 9001:2015

applicable to

Design, production and recovery of mechanical tools

The certificate has been issued under No. **399825** for the registration period from 28th April 2019 to 27th April 2022. The first certificate date of issue is 28th April 2016.

Approved by

Printed by

validity code: **A6778FC4-6C7**
Check the validity of this certificate using this code at **www.ll-c.info**

ACSQ Certification Body

CERTIFICATE

Nr. 399825

it certifies that the Quality Management System of

I.G. UTENSILI di Gallesi

Via Verzelloni 12/b - 42015 Correggio (RE)

has been assessed and found complying to the requirements of the standard:

ISO 9001:2015

for the following Scope of Certification:

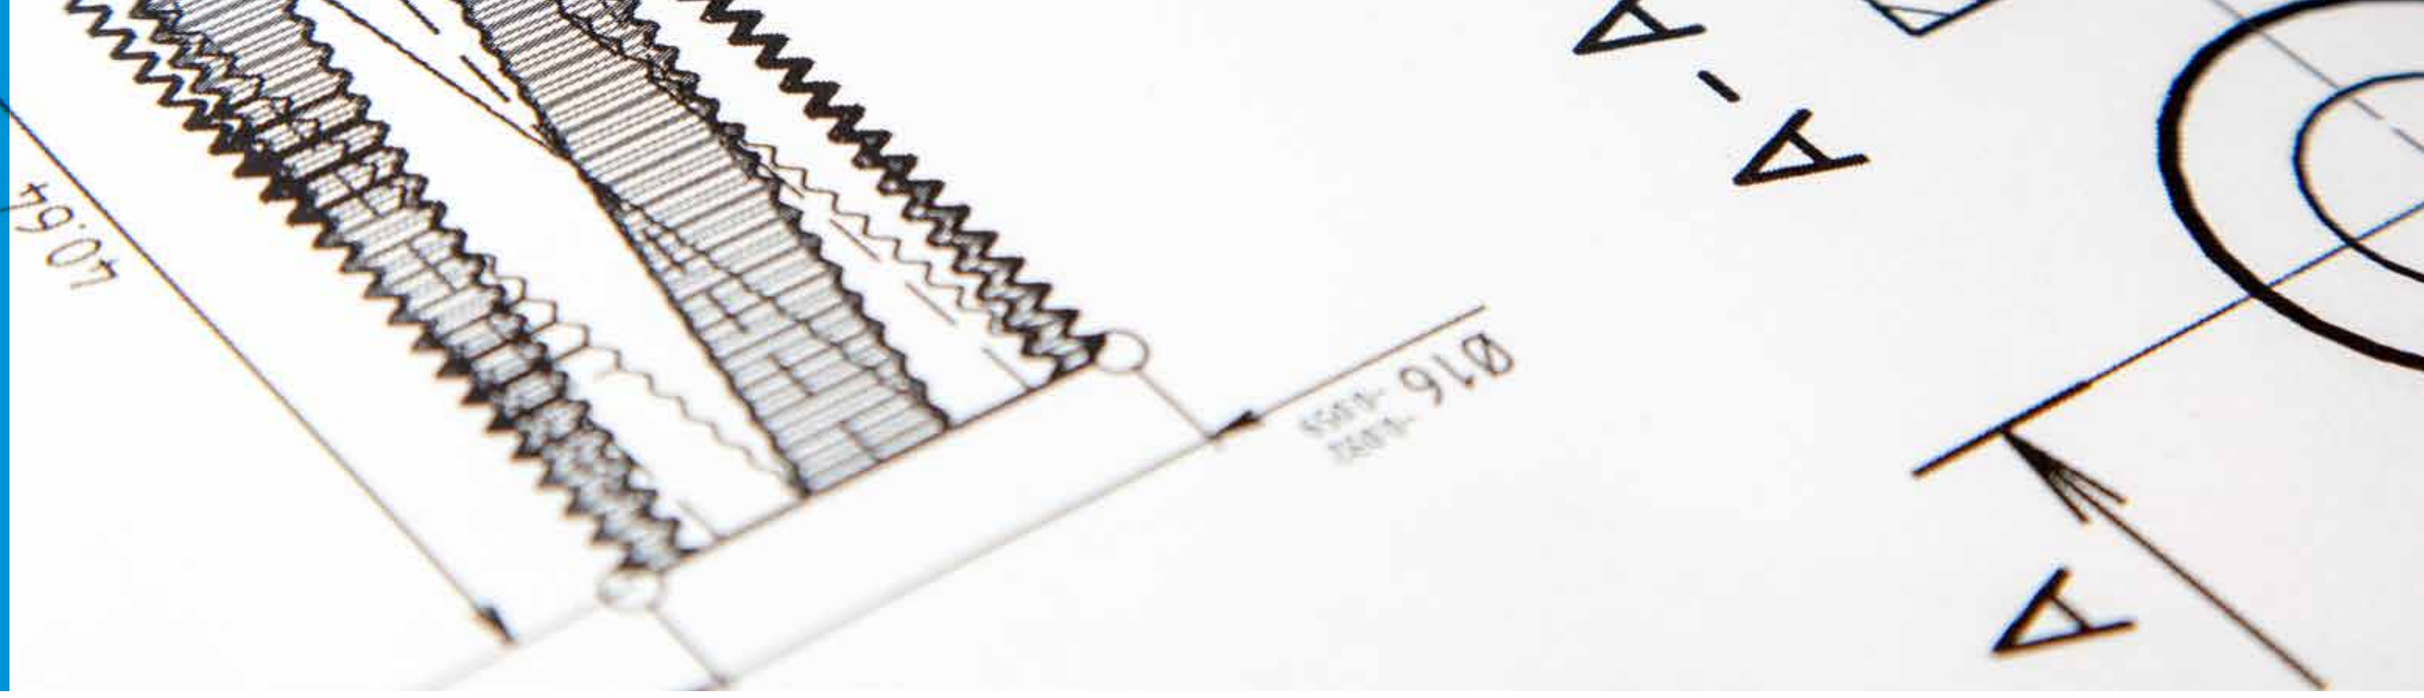
Design, production and restoration of mechanical tools.

EA Code: 17 NACE Code: 25.73

First certificate issue date:	28-04-2016
Current certificate issue date:	28-04-2019
Certifcate expiry date:	27-04-2022
Registration nr.:	399825
Validity Code:	A6778FC4-6C7

ACSQ Certification Authority

Certificates are available on www.acsq.it. Certificate validity subject to the successful of surveillance audits of the Management System. Additional information to be found on Terms and Conditions on www.acsq.it. Validity of Registration Number to be checked on www.ll-c.info.



Il progresso non si ferma, IGUTENSILI nemmeno

Progress does not stand still, nor does IGUTENSILI

L'esperienza progettuale maturata in oltre 45 anni di attività, associata all'elevata potenzialità produttiva, rendono IGUTENSILI un punto di riferimento nel panorama nazionale ed estero per quanto concerne lo sviluppo e realizzazione di utensili per asportazione truciolo – elettroerosione – elettrosaldatura e asservimenti macchine utensili, il tutto concepito in funzione delle specifiche esigenze delle aziende cliente.

La scelta strategica di concentrare le proprie attività nelle lavorazioni speciali – semi standard e standard di altissima qualità, unitamente ai costanti investimenti per l'acquisizione e l'implementazione delle più innovative tecnologie di produzione, permettono ad IGUTENSILI di guadagnare e rafforzare ogni giorno la fiducia del mercato Italiano ed estero.

La molteplicità di materiali trasformati in utensili quali HSS / HSSE acciaio super rapido – ASP acciaio super rapido tecnologia delle polveri – HM metallo duro – PCD / CBN diamante policristallino e naturale – Tungsteno – Tungsteno Lantanio – Rame – Grafite, rendono possibile la creazione di una vastissima gamma di utensili per asportazione truciolo, elettroerosione ed elettrosaldatura.

The design experience gained in over 45 years of business, alongside the high production capacity, make IGUTENSILI a reference point both nationally and internationally in the development and creation of tools for chip removal – electro-erosion – electro-welding and machine tool tending, all of which are designed according to the specific needs of its customers.

The strategic choice to focus its business on special machining – semi-standard and high-quality standards, together with constant investment in the acquisition and implementation of the most innovative production technologies, enable IGUTENSILI to earn and reaffirm the trust given by the Italian and foreign market every single day.

The diverse materials transformed into tools such as HSS/ HSSE high-speed steel – ASP high speed steel powder technology – HM hard metal – PCD/CBN polycrystalline and natural diamond – Tungsten – Tungsten Lanthanum – Copper – Graphite make it possible to create a vast range of tools for chip removal, electro-erosion and electro-welding.

La produzione di punte, punte a gradino, punte per alesare, punte ad inserti, alesatori ad alte prestazioni, maschi, frese per filettare, utensili di tornitura, utensili per scanalatura e troncatura, frese, frese ad inserti, elettrodi speciali a disegno e standard, ci permettono di servire al meglio tutti i settori industriali quali motorsport, aereonautica, automotive, elettrosaldatura, energia, ferroviari, meccanica, medicale, nautica, oleodinamica, ricerca.

The production of drill bits, stepped drill bits, reamer drill bits, insert drill bits, high performance reamers, taps, thread milling cutters, turning tools, grooving and parting tools, milling cutters, insert cutters, special and standard electrodes all allow us to better serve every industrial sector including MOTORSPORT – AVIATION – AUTOMOTIVE – ELECTRO-WELDING- ENERGY – RAILWAY – MECHANICS – MEDICAL – NAUTICAL – HYDRAULIC – RESEARCH.

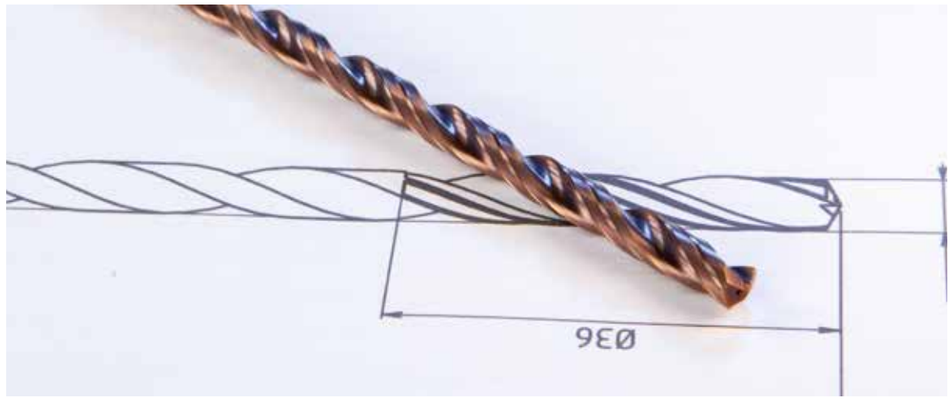
PIG

TECNOLOGIA DI FORATURA
PUNTE

DRILLING TECHNOLOGY
TIPS



Con le punte PIG di IGUTENSILI le lavorazioni di foratura vengono eseguite rapidamente e in modo produttivo senza rinunciare alla qualità della lavorazione.

Questi utensili sono impiegabili su di una vastissima gamma di macchinari a controllo numerico e/o tradizionali come CENTRI di LAVORO, CENTRI di TORNITURA, TRANSFER ed anche su LINEE DI PRODUZIONE AVANZATA.
PIG è in grado di forare profondità da 3xD fino a 30xD, l'utensile è dotato di REFRIGERAZIONE forzata INTERNA alla TESTA, garantendo in questo modo un'ottima lubrificazione nel punto di taglio ed una eccellente evacuazione del truciolo.

Gli utensili PIG, sono rivestiti NF o ALU in funzione del materiale da lavorare, raggiungono alti valori di taglio e lunga durata, garantendo sempre la massima stabilità del ciclo produttivo, è possibile eseguire operazione di affilatura e rivestimento, donando all'utensile stesso nuova vita con rendimenti eccellenti.

Da non sottovalutare la possibilità di produrre Punte PIG multi diametri speciali a disegno, con lo stesso utensile potremo eseguire foratura di cavità a gradini.

With the PIG tips by IGUTENSILI, drilling operations are carried out quickly and productively without sacrificing the quality of processing.

These tools can be used on a very wide range of CNC machines and/or traditional machinery such as WORK CENTRES, TURNING CENTRES, TRANSFER and even ADVANCED PRODUCTION LINES.
PIG is able to drill depths from 3xD up to 30xD, the tool is equipped with forced INTERNAL COOLANT, thus ensuring excellent lubrication at the drilling point and excellent chip evacuation.

PIG tools are NF or ALU coated according to the material to be processed, reaching high cutting values and long life, always guaranteeing maximum stability of the production cycle; it is possible to perform sharpening and coating operations, giving the tool a new life with excellent returns.

Not to underestimate the possibility of producing special multi-diameter customised PIG tips, with the same tool we will be able to drill stepped holes.

I valori di velocità di taglio / periferica (vc in m/min) qui elencati sono puramente indicativi e devono essere adattati alle condizioni d'impiego (materiale, lubrorefrigerazione, macchina utensile ecc.). Confronto internazionale dei materiali, vedere pagina Z • 21

The cutting speeds (vc in m/min) listed in the respective columns are standard values which have to be adjusted to individual work conditions (material, lubrication, machine etc.). International comparison of materials, see page Z • 21

V = Velocità (m/min)
F = Avanzamento (mm)

V = Speed (m/min)

PIG

I valori di velocità di taglio / periferica (vc in m/min) qui elencati sono puramente indicativi e devono essere adattati alle condizioni d'impiego (materiale, lubrorefrigerazione, macchina utensile ecc.). Confronto internazionale dei materiali, vedere pagina Z • 21

The cutting speeds (vc in m/min) listed in the respective columns are standard values which have to be adjusted to individual work conditions (material, lubrication, machine etc.). International comparison of materials, see page Z • 21

V = Velocità (m/min) V = Speed (m/min)
F = Avanzamento (mm) F = Feed (mm)

PAW

TECNOLOGIA DI FORATURA/ALESATURA
PUNTE ALESATRICI

DRILLING/REAMING TECHNOLOGY
REAMING BITS

Con le punte alesatrici PAW di IGUTENSILI le lavorazioni di foratura vengono eseguite rapidamente e in modo produttivo senza rinunciare alla qualità della lavorazione. Questi utensili sono impiegabili su di una vastissima gamma di macchinari a controllo numerico e/o tradizionali come CENTRI di LAVORO, CENTRI di TORNITURA, TRANSFER ed anche su LINEE DI PRODUZIONE AVANZATA ove è possibile abbattere sia i tempi di lavorazione che di attrezzaggio, in alcuni casi è stato possibile eliminare intere stazioni di lavoro. L'utensile PAW-Foratore-Alesatore è une conseguenza di questo impegno nel realizzare forature alesate in modo VELOCE e con la massima EFFICACIA.

Con la sintesi di due strumenti e, di conseguenza, due lavorazioni accorpate con unico utensile, si offrono ampi margini di risparmio, tempi macchina ridotti, gestione utensileria semplificata. Nel PAW-Foratore-Alesatore due taglienti sono riservati alla sgrossatura, a seguire entrano in azione altri sei taglienti addetti alla super finitura del foro, PAW è in grado di forare profondità pari a 3xD / 5xD, l'utensile è dotato di REFRIGERAZIONE forzata INTERNA alla TESTA, garantendo in questo modo un'ottima lubrificazione nel punto di taglio ed una eccellente evacuazione del truciolo. Esse assicurano rugosità ridotte, massima precisione dimensionale e circolarità meglio degli alesatori tradizionali, riducendo al minimo la produzione di bave eliminando così successive operazioni di pulizia / sbavatura.

Gli utensili PAW-Foratore-Alesatore, sono rivestiti TNFS o DIP in funzione del materiale da lavorare, raggiungono alti valori di taglio e lunga durata, garantendo sempre la massima stabilità del ciclo produttivo, inoltre i PAW-Foratore-Alesatore, nonostante la complessa tecnologia costruttiva, permettono le operazioni di affilatura e rivestimento, donando all'utensile stesso nuova vita con rendimenti eccellenti. Da non sottovalutare la possibilità di produrre Punte Alesatrici PAW multi diametri speciali a disegno, con lo stesso utensile potremo eseguire foratura di cavità a gradini, non solo si potranno eliminare gli alesatori ma anche altri utensili di preforatura in sagoma.

With PAW reaming tips by IGUTENSILI, drilling operations are carried out quickly and productively without sacrificing the quality of processing.
These tools can be used on a very wide range of CNC machines and/or traditional machinery such as WORK CENTRES, TURNING CENTRES, TRANSFER and even ADVANCED PRODUCTION LINES where it is possible to reduce both processing and tooling times, in some cases it was possible to eliminate entire workstations.
The PAW-Drilling-Reamer tool is a consequence of this commitment in making bored holes QUICKLY and with the maximum EFFECTIVENESS.

The union of the two tools and, consequently, two machining processes merged into a single tool, offer significant savings, reduced machine times and simplified tool management.
In the PAW-Drilling-Reamer two cutting edges are reserved for roughing, followed by another six cutting edges involved in the super finishing of the hole, PAW is able to drill depths equal to 3xD / 5xD, the tool is equipped with INTERNAL forced COOLANT, thus guaranteeing excellent lubrication at the cutting point and excellent chip evacuation.
These tools ensure reduced roughness, maximum dimensional accuracy and circularity better than traditional reamers, reducing burr production to a minimum, thus eliminating subsequent cleaning/deburring operations.

The PAW-Drilling-Reamer tools are TNFS or DIP coated according to the material to be processed, reaching high cutting values and long life, always guaranteeing the maximum stability of the production cycle; also the PAW-Drilling-Reamer, despite the complex manufacturing technology, allow sharpening and coating operations, giving the tool a new lease of life with excellent yields.
Not to underestimate the possibility of producing special multi-diameter customised PAW reamer bits, with the same tool we will be able to drill stepped holes, not only can reamers be eliminated but also other pre-drilling shaping tools.

I valori di velocità di taglio / periferica (vc in m/min) qui elencati sono puramente indicativi e devono essere adattati alle condizioni d'impiego (materiale, lubrorefrigerazione, macchina utensile ecc.). Confronto internazionale dei materiali, vedere pagina Z • 21

The cutting speeds (vc in m/min) listed in the respective columns are standard values which have to be adjusted to individual work conditions (material, lubrication, machine etc.). International comparison of materials, see page Z • 21

Vc = Velocità di taglio (m/min) Vc = Cuttind speed (m/min)
F = Avanzamento F = Feed

IGUTENSILI
PAW

REA

TECNOLOGIA DI ALESATURA AD ALTA VELOCITÀ
ALESATORI

HIGH SPEED REAMING TECHNOLOGY
REAMERS

Con gli alesatori ad alta velocità REA di IGUTENSILI le lavorazioni di foratura vengono eseguite rapidamente e in modo produttivo senza rinunciare alla qualità della lavorazione.
Questi utensili sono impiegabili su di una vastissima gamma di macchinari a controllo numerico e/o tradizionali come CENTRI di LAVORO, CENTRI di TORNITURA, TRANSFER ed anche su LINEE DI PRODUZIONE AVANZATA ove è possibile abbattere sia i tempi di lavorazione che di attrezzaggio, in alcuni casi è stato possibile eliminare intere stazioni di lavoro.

L'utensile REA-Alesatore è une conseguenza di questo impegno nel realizzare alesature in modo VELOCE e con la massima EFFICACIA.
Nel REA-Alesatore la specifica conformazione delle geometrie utensile permette di aggredire il materiale con avanzamenti impensabili per utensili di alesatura standard, REA è dotato di REFRIGERAZIONE forzata INTERNA RADIALE, garantendo in questo modo un'ottima lubrificazione nel punto di taglio ed una eccellente evacuazione del truciolo.

Le stesse geometrie appositamente studiate assicurano rugosità ridotte, massima precisione dimensionale e circolarità, riducendo al minimo la produzione di bave eliminando così successive operazioni di pulizia / sbavatura.

Gli utensili REA-Alesatori, sono rivestiti TNFS, nonostante la complessa tecnologia costruttiva, permettono le operazioni di affilatura e rivestimento, donando all'utensile stesso nuova vita con rendimenti eccellenti.
Da non sottovalutare la possibilità di produrre Alesatori REA con diametri speciali.

With REA high speed reamers by IGUTENSILI, drilling operations are carried out quickly and productively without sacrificing the quality of processing.
These tools can be used on a very wide range of CNC machines and/or traditional machinery such as WORK CENTRES, TURNING CENTRES, TRANSFER and even ADVANCED PRODUCTION LINES where it is possible to reduce both processing and tooling times, in some cases it was possible to eliminate entire workstations.

The REA-Reamer tool is a consequence of this commitment in achieving reaming bores QUICKLY and with the maximum EFFECTIVENESS.
In the REA-Reamer the specific conformation of the tool geometries makes possible to attack the material with unthinkable advances for standard reaming tools, REA is equipped with RADIAL INTERNAL forced COOLANT, thus ensuring excellent lubrication at the cutting point and an excellent evacuation of the chip.

The same specially designed geometries ensure reduced roughness, maximum dimensional accuracy and circularity, minimising the production of burrs thus eliminating subsequent cleaning/deburring operations.

The REA-Reaming tools, are TNFS coated, despite the complex manufacturing technology, allow the sharpening and coating operations, giving the tool a new life with excellent yields.
Not to underestimate the possibility of producing REA reamers with special diameters.

I valori di velocità di taglio / periferica (vc in m/min) qui elencati sono puramente indicativi e devono essere adattati alle condizioni d'impiego (materiale, lubrorefrigerazione, macchina utensile ecc.). Confronto internazionale dei materiali, vedere pagina Z • 21

The cutting speeds (vc in m/min) listed in the respective columns are standard values which have to be adjusted to individual work conditions (material, lubrication, machine etc.). International comparison of materials, see page Z • 21

V = Velocità (m/min)
F = Avanzamento (mm)

V = Speed (m/min)
F = Feed (mm)

L'adduzione interna di refrigerante e la spaziatura fortemente disuguale dei taglienti sono caratteristiche che garantiscono tolleranze di foro molto strette e finiture superficiali di alta qualità.

VANTAGGI

Alta produttività grazie ad elevati parametri di taglio
Costanza e produttività che consentono di ridurre tempi e costi
Eccellente finitura superficiale del componente
Concentricità uniforme, per la precisione dimensionale ed una lunga durata del tagliente
Elevata stabilità grazie al corpo in metallo duro
Adduzione interna di refrigerante, per ottimizzare l'evacuazione del truciolo e ridurre l'usura

CARATTERISTICHE

Carburo a micrograna di durezza e tenacità elevate
L'adduzione interna di refrigerante (assiale per la scanalatura diritta e laterale per quella elicoidale) consente di applicare il refrigerante direttamente sulla zona di taglio, favorendo una superiore durata del tagliente ed una buona evacuazione del truciolo
Stelo DIN 65535 HA con tolleranza H6 e per bloccaggio diretto in mandrini idraulici, a calettamento termico e ad alta precisione
Geometria delle scanalature con spaziatura fortemente disuguale

APPLICAZIONE

Per tutti i segmenti industriali (lavorazione generale, stampi e matrici, industria automobilistica, generazione di energia ed elettricità, ecc.)
Disponibile con scanalatura elicoidale per fori passanti e con scanalatura diritta per fori ciechi

VANTAGGI PER L'UTILIZZATORE

Per elevate prestazioni nell'alesatura di precisione su centri di lavoro
Elevati parametri di taglio significano elevata produttività e riduzione dei tempi e costi di produzione.
Eccellente finitura superficiale dei componenti realizzati.
Uniforme concentricità degli alesatori REA, lunga vita dello stesso dimensioni precise.
Per alesatura su una vasta gamma di materiali, anche con durezze sino a 63HRC. Gli alesatori REA sono specificatamente studiati per lavorazioni su Acciaio Inox.
Nel caso gli alesatori siano dotati di gole elicoidali sinistre e passaggio refrigerante interno per alesatura di fori passanti, i trucioli vengono spinti in avanti, prevenendo il loro effetto negativo per quanto concerne la qualità della superficie foro.
Gli alesatori con gole diritte e passaggio refrigerante interno, per l'esecuzione di fori ciechi, assicurano che i trucioli si rompano in piccoli frammenti, facili da evaquare per una lavorazione senza problemi.

SCANALATURA ELICOIDALE

Per fori passanti
Deflusso dei trucioli sicuro
Angolo di scorrimento dei trucioli ridotto
Adatta per tagli interrotti
SERIE 30

COMPARAZIONE TRA ALESATORI A PASSO DIFFERENZIATO E ALESATORI REA

Le gole degli alesatori REA ogni tagliente non ha la stessa divisione.

The internal coolant supply and the largely unequal spacing of the cutting edges are features that ensure very narrow hole tolerances and highest quality surface finishes.

FEATURES

High productivity thanks to high cutting parameters
Consistency and productivity that allow reducing times and costs
Excellent surface finish of the component
Uniform concentricity for dimensional accuracy and cutting edge long life
High stability thanks to the hard metal body
Internal coolant supply for optimising the evacuation of shavings and reduce wear

ADVANTAGES

High hardness and toughness micro-grain carbide
The internal coolant supply (axial for straight grooving and side for helical) allows to apply the coolant directly onto the cutting area, favouring a higher cutting edge life and a good evacuation of the shavings.
DIN 65535 HA stem with H6 tolerance and for direct clamping in hydraulic chucks, thermal joining and high precision.
Geometry of the grooves with highly unequal spacing

APPLICATION

Suitable for all industrial segments (general machining, moulds and dies, automotive, power generation and electricity, etc.)
Available with helical groove for through holes and with straight groove for blind holes

ADVANTAGES FOR THE USER

For high performance in machining centres precision boring
High cutting parameters mean high productivity and reduction of production time and costs.
Excellent surface finish of the produced components
Uniform concentricity of REA reamers, long life to the latter with exact dimensions
For boring on a wide range of materials, even with hardness up to 63HRC.
The REA reamers are specifically designed for machining on stainless steel.
In the event that reamers are equipped with left helical grooves and internal coolant passage for reaming of through holes, the shavings are pushed forward, preventing their negative effect with regard to the quality of the hole surface.
Reamers with straight grooves and internal coolant passage for the execution of blind holes ensure that the shavings break into small fragments, easy to evacuate for trouble-free machining.

HELICAL GROOVE

For through holes
Safe shavings outflow
Shavings reduced angle sliding
Suitable for interrupted cuts
SERIES 30

COMPARISON BETWEEN DIFFERENTIATED PITCH REAMERS AND THE REA REAMERS

The REA reamer grooves of each cutting edge do not have the same division.

FIL

TECNOLOGIA DI FILETTATURA
FRESE PER FILETTARE

THREADING TECHNOLOGY
THREADING MILLS

Con le frese per filettare FIL di IGUTENSILI le lavorazioni di filettatura vengono eseguite rapidamente e in modo produttivo senza rinunciare alla qualità della lavorazione. Questi utensili sono impiegabili su di una vastissima gamma di macchinari a controllo numerico come CENTRI di LAVORO, CENTRI di TORNITURA, TRANSFER ed anche su LINEE DI PRODUZIONE AVANZATA ove è possibile abbattere sia i tempi di lavorazione che di attrezzaggio, gli utensili FIL possono essere utilizzati su macchinari con almeno 3 assi in movimento. L'utensile FIL-Frese per filettare è une conseguenza di questo impegno nel realizzare filettature in modo VELOCE e con la massima EFFICACIA.

Con la sintesi di più strumenti e, di conseguenza, di più lavorazioni accorpate con unico utensile, si offrono ampi margini di risparmio, tempi macchina ridotti, gestione utensileria semplificata. Nel FIL sono presenti diverse tipologie di utensile dalla fresa per la sola filettatura fino ad utensile che FORA-SMUSSA-FILETTA in unica soluzione, anche su materiali con durezze pari a 65 HRC, la gamma di utensili FIL è dotata di REFRIGERAZIONE forzata INTERNA sia alla TESTA che RADIALE, garantendo in questo modo un'ottima lubrificazione nel punto di taglio ed una eccellente evacuazione del truciolo. Esse assicurano rugosità ridotte, massima precisione dimensionale, riducendo al minimo la produzione di bave eliminando così successive operazioni di pulizia / sbavatura.

Gli utensili FIL-Frese per FIlettare, sono rivestiti TNF o LTM in funzione del materiale da lavorare, raggiungono alti valori di taglio e lunga durata, garantendo sempre la massima stabilità del ciclo produttivo, inoltre i FIL, nonostante la complessa tecnologia costruttiva, permettono le operazioni di affilatura e rivestimento, donando all'utensile stesso nuova vita con rendimenti eccellenti. Da non sottovalutare la possibilità di produrre Frese per Filettare FIL speciali a disegno, IGUTENSILI è in grado di sviluppare un'infinita gamma di filettature per le più svariate applicazioni, di seguito alcuni esempi, MJ DIN ISO 5855, NPSFR ANSI B1.20.3, W keg DIN 477, W zyl DIN 477, EG M DIN 8140-2, LK-M, Tr DIN 103, Tr-F DIN 103, Rd DIN 405...

With the FIL threading mills by IGUTENSILI the threading operations are performed quickly and productively without sacrificing the quality of the processing.
These tools can be used on a very wide range of CNC machines such as WORK CENTRES, TURNING CENTRES, TRANSFER and also on ADVANCED PRODUCTION LINES where it is possible to reduce both processing and tooling time; the FIL tools can be used on machines with at least 3 moving axes. The FIL-Threading mill is a consequence of this commitment in making threads in a FAST way and with the maximum EFFECTIVENESS.

The union of the two tools and, consequently, two machining processes merged into a single tool, offer significant savings, reduced machine times and simplified tool management. The FIL range includes different types of tools from the mill for threading only up to the tool that DRILL-TAPER-THREAD in a single solution, even on materials with hardness equal to 65 HRC, the FIL range of tools is equipped with INTERNAL HEAD and RADIAL forced COOLANT, guaranteeing in this way an excellent lubrication at the cutting point and an excellent chip evacuation. These tools ensure reduced roughness, maximum dimensional accuracy, reducing burr production to a minimum, thus eliminating subsequent cleaning/deburring operations.

The FIL-Threading tools are TNF or LTM coated according to the material to be processed, reaching high cutting values and long life, always guaranteeing the maximum stability of the production cycle; also, FIL, despite the complex manufacturing technology, allow sharpening and coating operations, giving the tool a new lease of life with excellent yields.
Not to underestimate the possibility of producing special FIL Threading Mills with special designs, IGUTENSILI is able to develop an infinite range of threads for the most varied applications, below some examples, MJ DIN ISO 5855, NPSFR ANSI B1.20.3, W keg DIN 477, W zyl DIN 477, EG M DIN 8140-2, LK-M, Tr DIN 103, Tr-F DIN 103, Rd DIN 405...

I valori di velocità di taglio / periferica (vc in m/min) qui elencati sono puramente indicativi e devono essere adattati alle condizioni d'impiego (materiale, lubrorefrigerazione, macchina utensile ecc.). Confronto internazionale dei materiali, vedere pagina Z • 21

The cutting speeds (vc in m/min) listed in the respective columns are standard values which have to be adjusted to individual work conditions (material, lubrication, machine etc.). International comparison of materials, see page Z • 21

Vc = Velocità di taglio (m/min)
Fz = Avanzamento per dente (mm)

Vc = Cuttind speed (m/min)
Fz = Feed for tooth (mm)

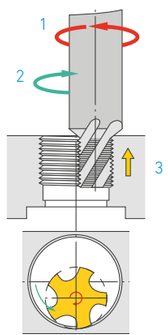
METODI DI FRESATURA DEI FILETTI
MILLING PROCEDURES

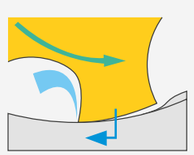
Fresatura in concordanza

Caratteristiche:
1. Rotazione dell'utensile in senso orario
2. Avanzamento utensile in senso anti-orario
3. Direzione di lavorazione: dal fondo verso l'esterno

Filetto destro



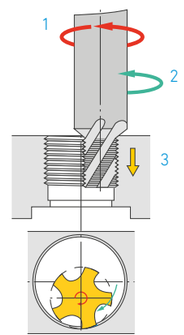
Nella fresatura in concordanza si ha lo spessore del truciolo 0 (h = 0) all'uscita del tagliente dal materiale



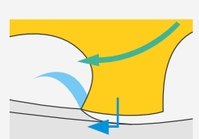
Fresatura in discordanza

Caratteristiche:
1. Rotazione dell'utensile in senso orario
2. Avanzamento utensile in senso orario
3. Direzione di lavorazione: dal fondo verso il fondo

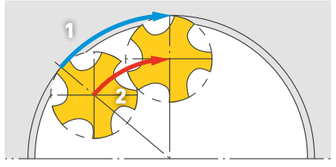
Filetto destro



Nella fresatura in discordanza lo spessore massimo del truciolo (h = max) si ha all'uscita del tagliente dal materiale



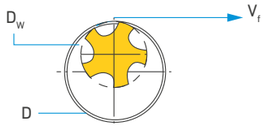
Calcolo dell' avanzamento



1. Avanzamento sul profilo (vf)
2. "Avanzamento della traiettoria del centro fresa vfm"

Avanzamento sul profilo fresa (vf)

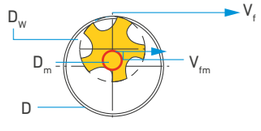
$v_f = n \cdot f_z \cdot z$ mm/min



Dw = diametro effettivo dell'utensile (mm)
N = numero di giri (min -1)
fz = avanzamento per dente (mm)

Avanzamento della traiettoria del centro fresa vfm

$v_{fm} = \frac{V_f \cdot (D - D_w)}{D}$ mm/min



z = numero dei taglienti
D = Diametro nominale del filetto = Diametro profilo esterno (mm)
Dm = Diametro della traiettoria del centro fresa (D – DW) in mm

Consigli per l'operatore

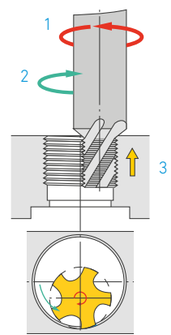
Nella fresatura di filetti, l'avanzamento dell'utensile può essere programmato in due modi:
O sul profilo utensile oppure al centro utensile, in funzione del tipo di controllo.
Per sapere con quale avanzamento lavora la macchina, è necessario:
1. Inserire il programma per la fresatura dei filetti.
2. Eseguire il ciclo "a vuoto".
3. Cronometrare il tempo di lavorazione.
4. Comparare il valore rilevato con il valore teorico.

Se il tempo rilevato è maggiore del tempo calcolato occorre lavorare con l'avanzamento al centro utensile.
Se il tempo di lavorazione rilevato è minore del tempo calcolato occorre lavorare con l'avanzamento sul profilo utensile.

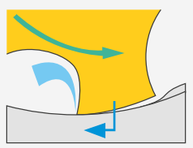
Climb milling

Characteristics:
1. Tool rotation direction "right"
2. Toolpath counter clockwise
3. Feed direction "outwards"

Right hand thread



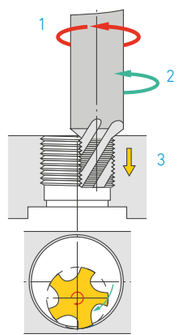
When climb milling, the chip thickness at the end of cut is always 0 (h=0)



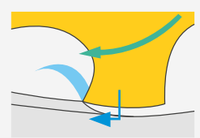
Conventional milling

Characteristics:
1. Tool rotation direction "right"
2. Toolpath clockwise
3. Feed direction "inwards"

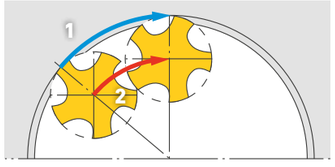
Right hand thread



When conventional milling, the chip thickness at the end of cut is always at maximum (h=max)



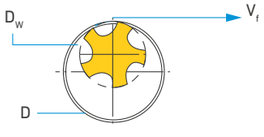
Feed rate calculation



1. Peripheral feedrate (vf)
2. Centerline feedrate vfm

Peripheral feedrate (vf)

$v_f = n \cdot f_z \cdot z$ mm/min



Dw = Effective diameter in mm
N = RPM in min-1
fz = Feed per tooth in mm

Centerline feedrate vfm

$v_{fm} = \frac{V_f \cdot (D - D_w)}{D}$ mm/min

z = Number of cutting edges (radial)
D = Nominal thread diameter = external profile diameter in mm
Dm = Centre path diameter (D – DW) in mm

Tips for the User

With thread milling there are two different programme possibilities with the feed motion of the tool:
On the one hand the machine controls the feed at the diameter of the tool, on the other hand the feed control is the tool center line.
In order to ascertain which method the machine control uses, the following method should be employed:
1. Enter the thread milling routine into the control.
2. Enter a safety margin into the program, so that the tool runs in air.
3. Run the program through and check the operating time.
4. Compare the actual time with the calculated theoretical time.

If the time is longer than the calculated time the feed is controlling the tool center line.
If the time is shorter than the calculated time the feed is controlling the diameter of the tool.

CALCOLO NUMERICO DEI DATI DI TAGLIO PER LA FRESATURA DI FILETTI

NUMERIC CALCULATION OF CUTTING DATA FOR THREAD MILLING

$$n = \frac{v_c \cdot 1000}{d \cdot \pi} \qquad v_c = \frac{d \cdot \pi \cdot n}{1000} \qquad v_f = f_z \cdot z \cdot n \qquad n = \frac{v_f}{f_z \cdot z} \qquad f_z = \frac{v_f}{z \cdot n}$$

Fresatura – profilo esterno

$$v_{fm} = \frac{v_f \cdot (D + d)}{D} \qquad v_f = \frac{D \cdot v_{fm}}{(D + d)}$$

Fresatura – profilo interno

$$v_{fm} = \frac{v_f \cdot (D - d)}{D} \qquad v_f = \frac{D \cdot v_{fm}}{(D - d)}$$

Penetrazione diritta

$$U_{pen.} = 0{,}25 \cdot v_{fm}$$

n = numero di giri del mandrino g./min
Vc = Velocità di taglio m/min
d = diametro fresa mm
D = Ø nominale del filetto mm
Vf = avanzamento sul diametro periferico mm/min

Penetrazione sulla traiettoria circolare

$$U_{pen.} = v_{fm}$$

Vfm = avanzamento al centro mm/min
U pen. = avanzamento di penetrazione consigliato mm/min
Fz = Avanzamento per dente mm
Z = numero di taglienti per fresa Quantità

Valori di correzione per la filettatura interna

È possibile calcolare la dimensione media del tagliente della fresa, che viene digitata nel comando della macchina, come segue:
Diametro nominale della fresa meno (0,05 x passo P)

Esempio: M30x3
Ø fresa: 20 mm

$$Ø\frac{20}{2} - (0{,}05 \cdot 3) = \underline{9{,}85\ mm}$$

9,85 mm viene inserito come dimensione del tagliente nel comando della macchina!

IGUTENSILI

$$n = \frac{v_c \cdot 1000}{d \cdot \pi} \qquad v_c = \frac{d \cdot \pi \cdot n}{1000} \qquad v_f = f_z \cdot z \cdot n \qquad n = \frac{v_f}{f_z \cdot z} \qquad f_z = \frac{v_f}{z \cdot n}$$

Milling - external contour

$$v_{fm} = \frac{v_f \cdot (D + d)}{D} \qquad v_f = \frac{D \cdot v_{fm}}{(D + d)}$$

Milling - internal contour

$$v_{fm} = \frac{v_f \cdot (D - d)}{D} \qquad v_f = \frac{D \cdot v_{fm}}{(D - d)}$$

Helical plunging

$$U_{arc} = 0{,}25 \cdot v_{fm}$$

n = rpm U/min
Vc = Cutting speed U/min
d = Tool diameter mm
D = Nominal thread-Ø
Vf = Feed rate at the diameter mm/min

Ramping in the arc

$$U_{arc} = v_{fm}$$

Vfm = Feed rate at the centre mm/min
U arc = programmed ramping feed rate mm/min
Fz = Feed per tooth mm
Z = number of cutting edges of the cutter piece

Correction values for the internal thread milling

The cutting edge diameter of the thread milling cutter which is entered into the machine control, can be calculated as follows:
half the cutter Ø - 0.05 x pitch p

Example: M30x3
Cutter-Ø: 20 mm

$$Ø\frac{20}{2} - (0{,}05 \cdot 3) = \underline{9{,}85\ mm}$$

9,85 mm is the cutting radius to be entered into the machine control

HMIG

TECNOLOGIA DI FILETTATURA MASCHI

THREADING TECHNOLOGY TAPS

Con i maschi HMIG di IGUTENSILI le lavorazioni di filettatura vengono eseguite rapidamente e in modo produttivo senza rinunciare alla qualità della lavorazione.

Questi utensili sono impiegabili su di una vastissima gamma di macchinari a controllo numerico e/o tradizionali come CENTRI di LAVORO, CENTRI di TORNITURA, TRANSFER ed anche su LINEE DI PRODUZIONE AVANZATA ove è indispensabile abbattere i tempi di lavorazione. L'utensile HMIG-Maschi è une conseguenza di questo impegno nel realizzare filettature in modo VELOCE e con la massima EFFICACIA, HMIG utilizza valori di taglio fino ad 80 m/min. parametro improponibili per maschi tradizionali. Nella gamma HMIG sono presenti diverse tipologie di utensile, proponiamo maschi a TAGLIARE e RULLARE per utilizzi su materiali docili o con durezze pari a 65 HRC, la gamma di utensili HMIG è dotata di REFRIGERAZIONE forzata INTERNA alla TESTA, garantendo in questo modo un'ottima lubrificazione nel punto di taglio ed una eccellente evacuazione del truciolo.

Gli utensili HMIG-Maschi, sono rivestiti TNF o LTM in funzione del materiale da lavorare, raggiungono alti valori di taglio e lunga durata, garantendo sempre la massima stabilità del ciclo produttivo, inoltre gli HMIG, nonostante la complessa tecnologia costruttiva, permettono le operazioni di affilatura e rivestimento, donando all'utensile stesso nuova vita con rendimenti eccellenti.

Da non sottovalutare la possibilità di produrre Maschi HMIG speciali a disegno, IGUTENSILI è in grado di sviluppare un'infinita gamma di filettature per le più svariate applicazioni, di seguito alcuni esempi, MJ DIN ISO 5855, NPSFR ANSI B1.20.3, W keg DIN 477, W zyl DIN 477, EG M DIN 8140-2, LK-M, Tr DIN 103, Tr-F DIN 103, Rd DIN 405 ...

With the HMIG taps by IGUTENSILI the threading operations are performed quickly and productively without sacrificing the quality of the processing.

These tools can be used on a very wide range of CNC machines and/or traditional machinery such as WORK CENTRES, TURNING CENTRES, TRANSFER and even ADVANCED PRODUCTION LINES where it is essential to reduce processing times. The HMIG-Taps tool is a consequence of this commitment in making threads FAST and with maximum EFFICACY, HMIG uses cutting values up to 80 m/min. impossible parameters for traditional taps. The HMIG range includes different types of tools, we offer CUT and ROLL taps for uses on soft materials or with hardness equal to 65 HRC, the range of HMIG tools is equipped with INTERNAL HEAD forced COOLANT, thus guaranteeing an excellent lubrication at the cutting point and excellent chip evacuation.

The HMIG-Taps tools are TNF or LTM coated according to the material to be processed, reaching high cutting values and long life, always guaranteeing the maximum stability of the production cycle; also, HMIG, despite the complex manufacturing technology, allow sharpening and coating operations, giving the tool a new lease of life with excellent yields.

Not to underestimate the possibility of producing special HMIG Taps with special designs, IGUTENSILI is able to develop an infinite range of threads for the most varied applications, below some examples, MJ DIN ISO 5855, NPSFR ANSI B1.20.3, W keg DIN 477, W zyl DIN 477, EG M DIN 8140-2, LK-M, Tr DIN 103, Tr-F DIN 103, Rd DIN 405...

I valori di velocità di taglio / periferica (vc in m/min) qui elencati sono puramente indicativi e devono essere adattati alle condizioni d'impiego (materiale, lubrorefrigerazione, macchina utensile ecc.). Confronto internazionale dei materiali, vedere pagina Z • 21

The cutting speeds (vc in m/min) listed in the respective columns are standard values which have to be adjusted to individual work conditions (material, lubrication, machine etc.). International comparison of materials, see page Z • 21

I valori di velocità di taglio / periferica (vc in m/min) qui elencati sono puramente indicativi e devono essere adattati alle condizioni d'impiego (materiale, lubrorefrigerazione, macchina utensile ecc.). Confronto internazionale dei materiali, vedere pagina Z • 21

The cutting speeds (vc in m/min) listed in the respective columns are standard values which have to be adjusted to individual work conditions (material, lubrication, machine etc.). International comparison of materials, see page Z • 21

Vc = Velocità di taglio (m/min) Vc = Cuttind speed (m/min)

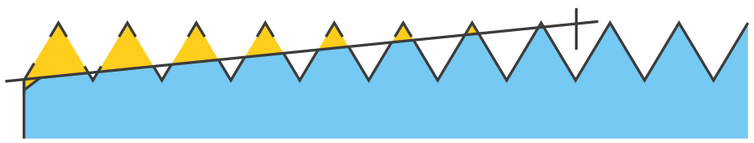
FORME D'IMBOCCO
CHAMFER FORMS

Forme e lunghezza d'imbocco per maschi a tagliare secondo DIN 2197
Chamfer forms and chamfer lengths for taps acc. DIN 2197

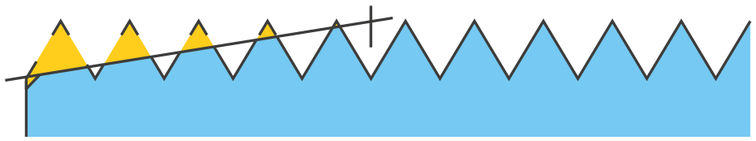
Forma A
Form A

Lunghezza d'imbocco 6 - 8 filetti
Per scanalature diritte
For straight flutes
Chamfer length 6-8 threads



Forma B
Form B

Lunghezza d'imbocco di 3,5-5,5 filetti
Per scanalature diritte con imbocco corretto
Chamfer length 3.5-5.5 threads
For straight flutes with spiral point

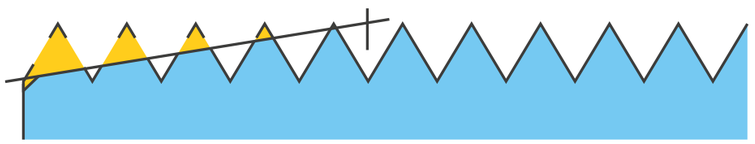


Forma C
Form C

Lunghezza d'imbocco di 2-3 filetti
Per scanalature diritte o elicoidali
Chamfer length 2-3 threads
For straight or spiral fl utes

Forma D
Form D

Lunghezza d'imbocco di 3,5-5 filetti
Per scanalature diritte o elicoidali
Chamfer length 3.5-5 threads
For straight or spiral flutes



Forma E
Form E

Lunghezza d'imbocco di 1,5-2 filetti
Per scanalature diritte o elicoidali
Chamfer length 1.5-2 threads
For straight or spiral flutes

Forma F
Form F

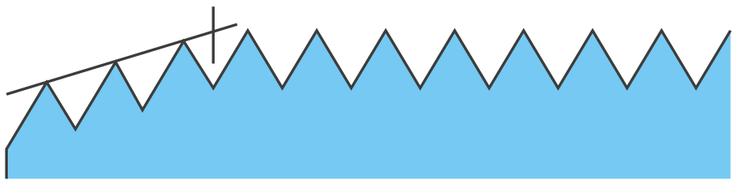
Lunghezza d'imbocco di 1-1,5 filetti
Per scanalature diritte o elicoidali
Chamfer length 1-1,5 threads
For straight or spiral flutes

FORME D'IMBOCCO
LEAD TAPER FORMS

Forme e lunghezza d'imbocco per maschi a rullare secondo DIN 2175
Lead taper forms and lead taper lengths for cold-forming taps acc. DIN 2175

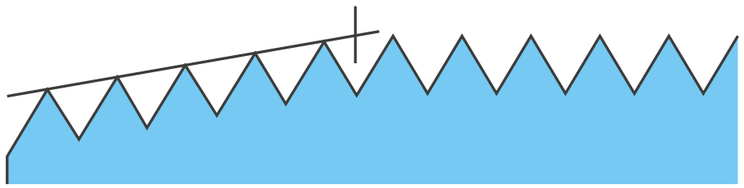
Forma C
Form C

Lunghezza d'imbocco di 2-3 filetti
Chamfer length 2-3 threads



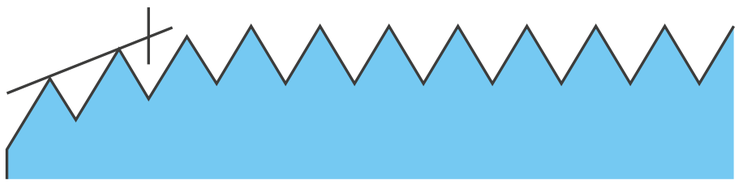
Forma D
Form D

Lunghezza d'imbocco di 3,5-5 filetti
Chamfer length 3.5-5 threads



Forma E
Form E

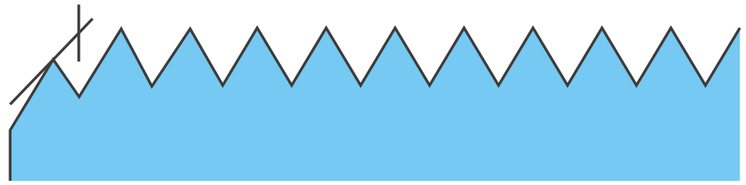
Lunghezza d'imbocco di 1,5-2 filetti
Chamfer length 1.5-2 threads



IGUTENSILI

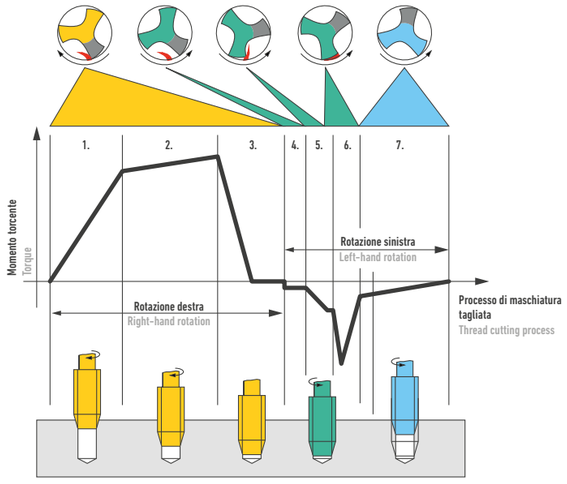
Forma F
Form F

Lunghezza d'imbocco di 1-1,5 filetti
Chamfer length 1-1,5 threads



MASCHI A TAGLIARE
CUTTING TAPS

Diagramma schematico del momento torcente nella maschiatura tagliata
Schematic of torque curve during a thread cutting process



1) Primo taglio del maschio fino al contatto completo di tutti i denti d'imbocco

2) Taglio del maschio con tutti i denti d'imbocco

3) Decelerazione del mandrino macchina fino all'arresto

4) Inizio del movimento di ritorno del mandrino fino al contatto del dorso del dente con il truciolo residuo

5) Rottura del truciolo

6) Evaquazione del truciolo residuo (la sua dimensione dipende dall'angolo di spoglia dell'imbocco e dall'angolo di taglio dorsale del maschio)

7) Attrito radente fra maschio e pezzo

1) Beginning of cut to full contact of all chamfer teeth

2) Cutting torque of the tap which is now cutting with all its chamfer teeth

3) Braking the machine spindle to a stop

4) Beginning reversal of the spindle to contact of the tooth back with the chip root left standing by the next cutting tap tooth

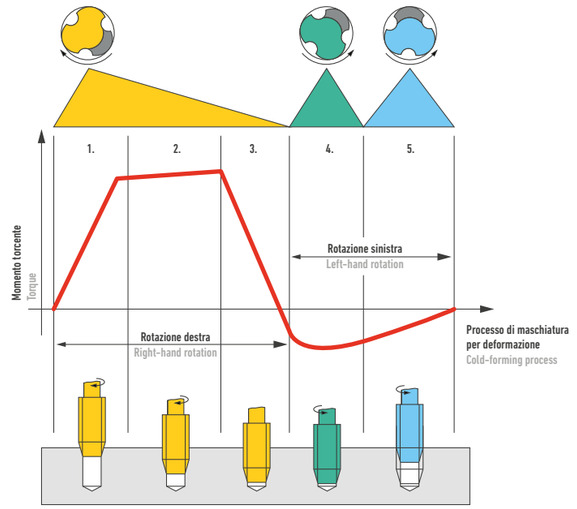
5) Shearing off the chip root

6) Squashing back the chip root remains left after the shearing off of the chip root (size depending on the chamfer relief angle of the tap and on the rear cutting angle of the tap tooth)

7) Sliding friction between tap and workpiece

MASCHI A RULLARE
FORMING TAPS

Diagramma schematico del momento torcente nella maschiatura rullata
Schematic of torque curve in the cold forming of threads



1) Prima deformazione del maschio a rullare fino al completo contatto di tutti i lobi in imbocco

2) Massimo sforzo dell'imbocco completamente inserito nel materiale

3) Decelerazione del mandrino macchina fino all'arresto

4) Inizio del movimento di ritorno del mandrino con attrito radente

5) Attrito radente fra maschio a rullare e pezzo

1) Beginning of forming process until all lead taper teeth are in contact.

2) Forming work of the lead taper which is now in full contact

3) Braking the machine spindle to a stop

4) Beginning reversal of the spindle with sliding friction

5) Sliding friction between cold-forming tap and workpiece

FIG

TECNOLOGIA DI FRESATURA
FRESE

MILLING TECHNOLOGY
MILLS

Con le frese FIG di IGUTENSILI le lavorazioni di fresatura vengono eseguite rapidamente e in modo produttivo senza rinunciare alla qualità della lavorazione.

Questi utensili sono impiegabili su di una vastissima gamma di macchinari a controllo numerico e/o tradizionali come CENTRI di LAVORO, CENTRI di TORNITURA, TRANSFER ed anche su LINEE DI PRODUZIONE AVANZATA ove è indispensabile abbattere i tempi di lavorazione.
L'utensile FIG è une conseguenza di questo impegno nel realizzare fresature in modo VELOCE e con la massima EFFICACIA.

Nella gamma FIG per il momento è presente un solo modello di utensile in grado di eseguire operazione di sgrossatura / finitura in unica soluzione, l'utensile è in grado di operare su di una vastissima gamma di materiali unificando, eliminando un utensile dal ciclo produttivo.
Gli utensili FIG, sono rivestiti LCA, raggiungono alti valori di taglio e lunga durata, garantendo sempre la massima stabilità del ciclo produttivo, inoltre FIG, nonostante la complessa tecnologia costruttiva, permette le operazioni di affilatura e rivestimento, donando all'utensile stesso nuova vita con rendimenti eccellenti.

Da non sottovalutare la possibilità di produrre FIG speciali a disegno per dimensioni fuori catalogo.

With the FIG mills by IGUTENSILI the milling operations are performed quickly and productively without sacrificing the quality of the processing.

These tools can be used on a very wide range of CNC machines and/or traditional machinery such as WORK CENTRES, TURNING CENTRES, TRANSFER and even ADVANCED PRODUCTION LINES where it is essential to reduce processing times.
Th FIG tool is a consequence of this commitment in making millings in a FAST way and with the maximum EFFECTIVENESS.

In the FIG range for the moment there is only one tool model able to perform a roughing / finishing operation in a single solution, the tool is able to operate on a very wide range of materials unifying, eliminating a tool from the production cycle.
The FIG tools are LCA coated, reaching high cutting values and long life, always guaranteeing the maximum stability of the production cycle; also, FIG, despite the complex construction technology, allows the operations of sharpening and coating, giving the tool new life with excellent returns.

Not to underestimate the possibility of producing special customised FIG mills, for diameters not included in the catalogue.

UNA NUOVA GEOMETRIA PER UNA MAGGIORE PRODUTTIVITÀ

A NEW GEOMETRY FOR HIGHER PRODUCTIVITY

Caratteristiche:

- Nelle lavorazioni di fresatura il tagliente entra ed esce dal materiale lavorato creando un ritmo naturale che diventa un dannoso ritmo armonico.
- Il ritmo armonico genera delle frequenze di risonanza che attraverso completamente l'utensile causando una delle maggiori forma di usura del tagliente nota come la scheggiatura da vibrazioni.
- Questa nuova geometria offre una notevole riduzione delle vibrazioni garantendo più stabilità e silenziosità nella lavorazione di fresatura

Una migliore geometria sullo spigolo tagliente con una ristretta tolleranza sul raggio di raccordo, dove è presente, per garantire una lavorazione più accurata e precisa riducendo lo sforzo di taglio e le pressioni esercitate sul tagliente.

Il vano tagliente a sezione variabile aiuta a controllare le vibrazioni ritmiche create dall'angolo di taglio delle frese standard riducendo così la formazione di vibrazioni armoniche.

La geometria dell'elica a forma asimmetrica, modificando l'angolo con cui ogni tagliente entra ed esce dal materiale durante la lavorazione, favorisce l'eliminazione delle vibrazioni armoniche che si formano con le frese tradizionali.

L'angolo di taglio è il fattore principale che determina la forma e lo spessore del truciolo, le forze e la temperatura nella zona di taglio. Grazie alla geometria con angolo di taglio variabile, modificano e controllano le dinamiche nelle lavorazioni di fresatura riducendo le vibrazioni ed offrendo un nuovo livello di produttività.

Characteristics:

- During standard milling operations, vibrations can be triggered by the geometry of the cutting edge (sound of harmonic rhythm).
- This harmonic rhythm creates some frequencies of resonance that pass through the tool, generating one of the major causes of wear of the cutting edge. This phenomenon is known as chipping by vibrations.
- This new geometry offers a significant reduction in vibrations, guaranteeing more stability and silence during the milling process.

A more functional geometry on the cutting edge, with a narrow tolerance on the connection radius, ensures a more accurate and precise process by reducing the cutting effort and the pressures on the cutting edge.

The cutting section with variable section helps to control the rhythmic vibrations created by the cutting angle of standard mills, while reducing the formation of harmonic vibrations.

The asymmetric shape of the helix, modifies the entry angle of the cutting edge, that enters and exits the material during processing, in favour of the elimination of the harmonic vibrations that happen with traditional drills.

The cutting angle is the main factor that determines the shape and thickness of the chip, the forces and the temperature in the cutting area. Thanks to the geometry with variable cutting angle, it modifies and controls the process within milling operations, reducing vibrations and offering a new level of productivity.

I valori di velocità di taglio / periferica (vc in m/min) qui elencati sono puramente indicativi e devono essere adattati alle condizioni d'impiego (materiale, lubrorefrigerazione, macchina utensile ecc.). Confronto internazionale dei materiali, vedere pagina Z • 21

The cutting speeds (vc in m/min) listed in the respective columns are standard values which have to be adjusted to individual work conditions (material, lubrication, machine etc.). International comparison of materials, see page Z • 21

Vc = Velocità di taglio (m/min)
Fz = Avanzamento per dente (mm)

Vc = Cuttind speed (m/min)
Fz = Feed for tooth (mm)

TECNOLOGIA DI FRESATURA E FORATURA PCD-CBN-CVD-MCD

MILLING AND DRILLING TECHNOLOGY PCD-CBN-CVD-MCD

Con la gamma di utensili DIA di IGUTENSILI le lavorazioni di fresatura e foratura vengono eseguite rapidamente e in modo produttivo senza rinunciare alla qualità della lavorazione.

Questi utensili sono impiegabili su di una vastissima gamma di macchinari a controllo numerico come CENTRI di LAVORO, CENTRI di TORNITURA, TRANSFER ed anche su LINEE DI PRODUZIONE AVANZATA ove è necessario abbattere sia i tempi di lavorazione che di attrezzaggio, in alcuni casi è stato possibile eliminare intere stazioni di lavoro.

L'utensile DIA-Frese e Punte è une conseguenza di questo impegno nel realizzare lavorazioni di asportazione truciolo in modo VELOCE e con la massima EFFICACIA.
DIA è dotato di REFRIGERAZIONE forzata INTERNA alla TESTA e RADIALE, garantendo in questo modo un'ottima lubrificazione nel punto di taglio ed una eccellente evacuazione del truciolo, DIA è in grado di lavorare grazie all'elevata durezza materiali strutturati leggeri come alluminio, magnesio e plastica rinforzata con fibre, garantendo finiture superficiali di altissima qualità ed una vita utensile inarrivabile con utensili standard in HM o HSS.
DIA assicurano rugosità ridotte (Ra 0,3), massima precisione dimensionale.

Gli utensili DIA-Frese e Punte, raggiungono alti valori di taglio e lunga durata, garantendo sempre la massima stabilità del ciclo produttivo, inoltre DIA nonostante la complessa tecnologia costruttiva, permette le operazioni di affilatura, donando all'utensile stesso nuova vita con rendimenti eccellenti.

Da non sottovalutare la possibilità di produrre DIA speciali a disegno, con lo stesso utensile potremo eseguire foratura di cavità a gradini, non solo si potranno eliminare gli alesatori ma anche altri utensili di preforatura in sagoma.

With the range of DIA tools by IGUTENSILI, milling and drilling operations are performed quickly and productively without sacrificing the quality of the work.

These tools can be used on a very wide range of CNC machines such as WORK CENTRES, TURNING CENTRES, TRANSFER and even ADVANCED PRODUCTION LINES where it is possible to reduce both processing and tooling times, in some cases it was possible to eliminate entire workstations.

The DIA-Cutters and Drills tool is a consequence of this commitment in carrying out machining operations where the chip is evacuated QUICKLY and with the maximum EFFECTIVENESS.
DIA is equipped with INTERNAL HEAD AND RADIAL forced COOLANT, thus ensuring excellent lubrication at the cutting point and excellent chip evacuation, DIA is able to work thanks to its high hardness, light structured materials such as aluminium, magnesium and fiber-reinforced plastic, ensuring very high quality surface finishes and an unattainable tool life with standard HM or HSS tools.
DIA ensure reduced roughness (Ra 0.3), maximum dimensional accuracy.

The DIA-Cutters and Drills, reach high cutting values and long life, always guaranteeing the maximum stability of the production cycle, moreover DIA despite the complex construction technology, allows the sharpening operations, giving the tool itself new life with excellent yields.

Not to underestimate the possibility of producing special customised DIA tools, with the same tool we will be able to drill stepped holes, not only can reamers be eliminated but also other pre-drilling shaping tools.

IGUTENSILI

I valori di velocità di taglio / periferica (vc in m/min) qui elencati sono puramente indicativi e devono essere adattati alle condizioni d'impiego (materiale, lubrorefrigerazione, macchina utensile ecc.). Confronto internazionale dei materiali, vedere pagina Z • 21

The cutting speeds (vc in m/min) listed in the respective columns are standard values which have to be adjusted to individual work conditions (material, lubrication, machine etc.). International comparison of materials, see page Z • 21

Vc = Velocità di taglio (m/min) Vc = Cuttind speed (m/min)

		Materiale	Material		Material examples	Mat. numbers	Vc Uncoated	Vc Coated NFS	F = 3 to 5 mm	F =5 to 8 mm	F =8 to 12 mm	F =12 to 16 mm

TABELLE FILETTATURE

Panoramica della filettatura secondo le norme DIN o le norme ISO (estratto dalla norma DIN 202).

In generale, l'abbreviazione della filettatura include la lettera di identificazione del filetto e il diametro nominale del filetto o la dimensione del filetto. Eventualmente è possibile aggiungere ulteriori informazioni relative all'inclinazione o al numero di giri ogni 25,4 mm, alla tolleranza, mobilità multipla, conicità e mobilità sinistra. Per molte delle filettature secondo gli standard DIN, il numero principale DIN viene indicato nell'abbreviazione per distinguere i filetti metrici ISO. Agli standard specificati nelle tabelle si applica esclusivamente l'ultima edizione della relativa norma.

Denominazione	Profilo	Identificazione	Esempio	Dimensione nominale	Normativa	Applicazione	
Filettatura metrica ISO (singola e multipla)		**M**	M0,8	Da 0,3 mm a 0,9 mm	DIN 14-1 BIS	Per orologeria e meccanica di precisione	
					DIN 14-4		
			M8	Da 1 mm a 68 mm	DIN 13-1	Generale (filettatura standard)	
			M24x4 P 2		DIN 13-52		
			M6x0,75	Da 1 mm a 1000 mm	DIN 13-2 BIS	Generale (filettatura sottile)	
			M8x1 LH		DIN 13-11		
			M24x4 P 2		DIN 13-52		
			M30x2 -4H 5H	Da 1,4 mm a 355 mm	LN 9163	Per l'ingegneria aerospaziale	
			M63x1,5	6 mm e 75 mm	DIN EN 60423 o DIN EN 50262	Tubi per installazioni elettriche	
Filettatura metrica ISO con campo tolleranza di transizione (filettatura precedente per il serraggio)			M10 sn 4	Da 3 mm a 150 mm	DIN 13-51	Per estremità avvitate ai perni filettati	Non sigillante
			M10 sk 6				
			M10 Sn 4 stretto	Da 3 mm a 150 mm			Sigillante
Filettatura metrica con grande gioco			M36	Da 12 mm a 180 mm	DIN 2510-2	Per collegamenti a vite con albero di espansione	
Filettatura metrica ISO, filettatura ricevente per inserti filettati		**EG M**	EG M 20	Da 2 mm a 52 mm	DIN 8140-2	Filettatura di montaggio (filettatura standard e sottile) per inserti filettati in filo	
Filettatura metrica ISO per il serraggio		**MFS**	MFS12x1,5	Da 5 mm a 16 mm	DIN 8141-1	Per il serraggio delle leghe colate in alluminio (filettatura standard e sottile)	
Filettatura esterna conica metrica		**M**	M 30 x 2 conico	Da 6 mm a 60 mm	DIN 158-1	Per tappi a vite e ingrassatori	
			M 30 x 2 conico corto				
Filettatura MJ (raggio nucleo allargato o nucleo-0 opposto alla filettatura M)		**MJ**	MJ6x1 -4h 6h	Da 1,6 mm a 39 mm	DIN ISO 5855-1 e DIN ISO 5855-2	Ingegneria aerospaziale	
			MJ6x1 -4H 5H				

Denominazione	Profilo	Identificazione	Esempio	Dimensione nominale	Normativa	Applicazione
Filettatura cilindrica per collegamenti in cui il sigillo non si trova nella filettatura		**G = PF (BSP, BSPF)**	G 1 ½ A G 1 ½ B	da 1⁄16 a 6	DIN EN ISO 228-1	Filettatura esterna per tubi, raccordi e accessori
			G 1 ½			Filettatura interna per tubi, raccordi e accessori
Filettatura cilindrica per collegamenti in cui il sigillo non si trova nella filettatura		**Rp = PS (BSPP)**	Rp ½	da 1⁄16 a 6	DIN EN 10226-1	Filettatura interna per tubi filettati e raccordi
			Rp ⅛	da ⅛ a 1 ½	DIN 3858	Filettatura interna per raccordi
Filettatura conica per collegamenti in cui il sigillo si trova nella filettatura		**R**	R ½	da 1⁄16 a 6	DIN EN 10226-1	Filettatura esterna per tubi filettati e raccordi

THREAD TABLES

Thread overview according to DIN standards or ISO standards (excerpt from DIN 202)

In general, the thread abbreviation includes the thread code and the nominal thread diameter or thread size. Additional information for pitch or number of turns per 25.4 mm, tolerance, multi-thread, tapering, and left-hand mobility may be added. For many threads according to DIN standards, the main DIN number is given in the abbreviation to distinguish them from metric ISO threads. Only the latest edition of the relevant standard applies to the standards specified in the tables.

Designation	Profile	Code letters	Examples	Nominal size	Normative	Application	
Metric ISO thread (single or multi-threaded)		**M**	M0,8	0,3 mm to 0,9 mm	DIN 14-1 BIS	For watches and precision engineering	
					DIN 14-4		
			M8	1 mm to 68 mm	DIN 13-1	General (coarse)	
			M24x4 P 2		DIN 13-52		
			M6x0,75	1 mm to 1000 mm	DIN 13-2 BIS	General (fine thread)	
			M8x1 LH		DIN 13-11		
			M24x4 P 2		DIN 13-52		
			M30x2 -4H 5H	1,4 mm to 355 mm	LN 9163	For aeronautics and space	
			M63x1,5	6 mm and 75 mm	DIN EN 60423 or DIN EN 50262	Electrical installation pipes	
Metric ISO thread with transition fit (former thread for force fit)			M10 sn 4	3 mm to 150 mm	DIN 13-51	For screwed ends at stud bolts filettati	Not sealing
			M10 sk 6				Sealing
Large-clearance metric thread			M36	12 mm to 180 mm	DIN 2510-2	For screw connections with expansion shaft	
Metric ISO thread, mounting thread for threaded inserts		**EG M**	EG M 20	2 mm to 52 mm	DIN 8140-2	Mounting thread (stanFromrd and fine thread) for threaded inserts made of wire	
Metric ISO thread for tight fit		**MFS**	MFS12x1,5	5 mm to 16 mm	DIN 8141-1	For tight fit in aluminium casting alloys (regular and fine thread)	
Metric tapered external thread		**M**	M 30 x 2	6 mm to 60 mm	DIN 158-1	For locking screws and grease	
			M 30 x 2				
MJ-thread (enlarged core radius or core-0 compared with the M-thread)		**MJ**	MJ6x1 -4h 6h	1,6 mm to 39 mm	DIN ISO 5855-1 and DIN ISO 5855-2	Air and space	
			MJ6x1 -4H 5H				

Designation	Profile	Code letters	Examples	Nominal size	Normative	Application
Cylindrical pipe thread for connections that do not seal in the thread		**G = PF (BSP, BSPF)**	G 1 ½ A G 1 ½ B	1/16 to 6	DIN EN ISO 228-1	External thread for pipes, pipe connections and fittings
			G 1 ½			Female thread for pipes, pipe connections and fittings
Cylindrical pipe thread for connections that seal in the thread		**Rp = PS (BSPP)**	Rp ½	1/16 to 6	DIN EN 10226-1	Female thread for threaded pipes and fittings
			Rp ⅛	⅛ to 1 ½	DIN 3858	Female thread for pipe fittings
Tapered pipe thread for connections that seal in the thread		**R**	R ½	1/16 to 6	DIN EN 10226-1	Male thread for threaded pipes and fittings
			R ⅛ - 1	⅛ to 1 ½	DIN 3858	Male thread for pipe fittings
		**Rc = PT (BSPT)**	Rc ½	1/16 to 6	DIN EN 10226-2	Female thread for threaded pipes and fittings
Metric ISO trapezoidal thread (single or multi-threaded)		**Tr**	Tr 40 x 7	8 mm to 300 mm	DIN 103-1 to DIN 103-8	General
			Tr 40 x 14 P 7			
Flat metric ISO trapezoidal thread (single or multi-threaded)			Tr 40 x 7		DIN 380-1 and DIN 380-2	
			Tr 40 x 14 P 7			
Trapezoidal thread (single or dual threaded) with clearance			Tr 48 x 12	48 mm	DIN 263-1 and DIN 263-2	For rail vehicles
			Tr 40 x 16 P 8	40 mm		
			Tr 32 x 1,5	12 mm to 32 mm	DIN 6341-2	For (pull) clamping jaws
Rounded trapezoidal thread			Tr 40 x 5	26 mm to 80 mm	DIN 30295-1 and DIN 30295-2	For rail vehicles
Trapezoidal thread		**KT**	KT 22	10 mm to 50 mm	DIN 6063-2	For plastic containers in the packaging industry
Metric saw thread (single or multi-threaded)		**S**	S 48 x 8 S 40 x 17 P 7	10 mm to 640 mm	DIN 513-1 to DIN 513-3	General
